

US Crude & Distillate -- Weekly S/D Monitor

Week ending 2026-06-26 | EIA Weekly Petroleum Status Report | Generated from live EIA weekly data.

Inventory snapshot vs 5-year seasonal norm

	level (Mb)	5-yr avg (Mb)	vs 5-yr avg (Mb)	vs 5-yr avg (%)	pos in 5-yr range	WoW D (Mb)	4-wk D (Mb)	vs yr-ago (Mb)
Crude (comm., ex-SPR)	408.4	437.8	-29.4	-6.7	-0.3	-3.8	-25.4	-10.6
Cushing	19.7	31.8	-12.1	-38.1	-0.0	0.7	-2.8	-1.1
Distillate	108.6	117.3	-8.7	-7.4	0.1	2.5	6.3	5.0

Crude

Commercial crude stocks are 408 Mb, 29 Mb (7%) below the 5-yr seasonal average and below the bottom of its 5-yr range. The last 4 weeks drew 25 Mb. The baseline projection has the deficit at 11 Mb by 2026-09-18 (narrowing).

Cushing sits at 19.7 Mb, below the bottom of its 5-yr range (-38% vs 5-yr avg) -- the WTI delivery point is critically thin.

Distillate

Distillate stocks are 109 Mb, 9 Mb (7%) below the 5-yr average, in the bottom quartile of its 5-yr range. 4-wk change: +6 Mb. Baseline projection puts the gap at -1 Mb vs norm by 2026-09-18, i.e. converging toward normal ahead of the winter heating season.

View

MODEL VIEW: crude TIGHT (supportive of flat price and backwardated WTI structure); distillate TIGHT (constructive for diesel cracks and HO spreads).

Regional & signal check

PADD 1 distillate 23.0 Mb, 6.7 Mb (23%) below its 5-yr norm -- NY Harbor tight, constructive for ULSD cracks; P1-P3 relative tightness -20.0 pts implies incentive to ship product east (Colonial-arb pull).

Prices: WTI \$73.59/bbl, NYH ULSD \$3.189/gal, diesel crack \$60.35/bbl (+0.58 \$/bbl over 4 wks). **Backtest (10y cap, n=517): tight-tercile distillate weeks preceded avg +0.25 \$/bbl 4-wk crack moves ($r = +0.02$, hit 52%) -- not supported.**

Method: weekly EIA balance (Supply - Demand = Δ Inventory), inventory level vs trailing 5-yr seasonal average, 12-week flow-based projection. Balance residual is tracked as a data-quality check only. PADD layer and price-signal backtest ride on the same seasonal framework (signal lagged 1 wk for WPSR publication).
